MP Cloud Technologies and emsCharts Announce Strategic Partnership to Provide an End to End Cloud Based Software Solution for the EMS Industry

(San Diego, June 20, 2018) MP Cloud Technologies and emsCharts today announced the formation of a strategic partnership to provide both new and existing customers a state of the art cloud-based end to end solution for the EMS industry.

The direct connection between AdvanceDispatch to emsCharts to AdvanceClaim allows shared customers to have quick, seamless data transmission from initial receipt of a request for service, through dispatch, documentation of patient care, state reporting, claim processing, and subsequent payment posting. The combined platform will be commercially marketed as AdvanceGold.

"MP Cloud Technologies is very excited to announce this partnership. We have worked with emsCharts for many years and are pleased to strengthen our relationship to a Strategic Partnership. Our strategy is to strengthen our product offering and double down on our mission to support the evolution of the EMS industry," said Rob Rodrigues, President and CEO of MP Cloud Technologies. "We are excited to offer our customers the ability to utilize emsCharts, the leading clinical documentation system for medical transportation."

"We have supported the AdvanceDispatch and AdvanceClaim products for many years and look forward to working with MP Cloud Technologies as a Strategic Partner," said Rick Mosteller, Senior Vice President for Business Development at emsCharts. "We are excited to offer our customers a complete software solution to meet their business needs and are committed to ensure a smooth transition from AdvanceCare over to emsCharts."

Both companies will continue to support customers who are utilizing other software products, but through this strategic partnership, will encourage their clientele to enjoy the benefits of having a completely integrated solution that will optimize their workflows in the AdvanceGold platform.

Business development representatives of both companies are working together to ensure customers have a smooth and efficient transition from AdvanceCare to emsCharts for clinical charting. The sales and technology teams of both companies stand ready to assist customers in evaluating the features and functionality of AdvanceGold, as well as the individual products.

About MP Cloud Technologies

MP Cloud Technologies is a leader in providing medical claims billing and dispatch cloud-based software solutions to the EMS industry. MP Cloud Technologies acquired the assets of MedaPoint in mid-2018 and is committed to innovation and integration within the medical transport industry. MP Cloud Technologies is headquartered in the Capital Factory in Austin, TX. They also have offices in Houston, TX, and Charleston, SC.
